

Virtual Commissioning (VCx)[®] Energy Efficiency Program

The VCx[®] energy efficiency program is a complimentary service for industrial and commercial customers offered by Power TakeOff in partnership with Potomac Edison's Maryland Energy Solutions for Business Program.

How It Works:

A trained energy advisor will analyze your facility's energy data, with no on-site visits necessary.

- **Utility Meter Data Analysis:** A remote analysis provides insight to understand energy usage at your facility to identify unexpected and wasted usage.
- **Personalized Recommendations:** With guidance through ongoing communication and discussions with a trained energy advisor, recommendations are provided for your facility that are easy to implement and are low or no cost to you. This includes real-time evaluation of energy efficiency improvements bundled with whole-building strategies.
- **Virtually Delivered:** No on-site visits or in-person audits required. Communication with an energy advisor is provided virtually and remotely, by email or phone.
- **Measured Results:** See the impact of implemented adjustments. Your dedicated energy advisor will measure and verify the energy savings impact.

Benefits of the VCx[®] program:

Provides custom recommendations based on insights from your meter data, typically reducing participant energy usage by 15%.*

Participating is fast and easy, and there are no eligibility requirements for equipment, fees or paperwork.

Scan the QR code to learn more.

For questions about the program or eligibility, contact us and speak with an energy advisor.

EmPOWER Maryland programs are funded by a charge on your energy bill. EmPOWER programs can help you reduce your energy consumption and save you money. Go to energysaveMD.com to learn more about EmPOWER and how you can participate.

By participating in energy efficiency and peak demand reduction programs, customers agree to allow their utility to retain ownership of all Capacity Rights, which refers to the demand reduction associated with any energy efficiency or peak demand reduction measures for which incentives were provided by the Company. Your utility will aggregate these energy efficiency demand reduction attributes into the PJM capacity market with proceeds being used to offset the program costs.
